Supplemental Table 5. Survival of individual GBM patients did not correlate with CAF levels. Shown are survival from time of diagnsosis, age at diagnosis, gender, and % of cells positive for CAF markers but negative for markers of other stromal cells in 11 IDH wildtype glioblastomas. Multivariate analysis revealed that in this cohort, neither age (P=0.9), gender (P=0.9), nor CAF levels (P=0.4) impacted survival. Abbreviations used: NPEE=negative for pericyte, epithelial, endothelial, and immune cell markers.

	Age	Gender
GBMpt1CAFs	58	M
GBMpt2CAFs	62	F
GBMpt3CAFs	61	M
GBMpt4CAFs	57	M
GBMpt5CAFs	59	F

Supplemental Table 6. Information on patients from which GBMptCAFs were obtained. Shown are age and gender of newly diagnosed GBM patients from whom GBMptCAFs were derived.
